PB GROUP
POLYBAGS PB PRINT

Fast and Friendly Packaging for Everyone!

Welcome to the 2025 product catalogue from the PB Group! We're excited to share that this year, we have over 70 fantastic new products available online and will be introducing even more throughout the year.

You can easily browse and purchase all our stocked products online at www.polybags.co.uk. Additionally, on our www.pbprint.co.uk website you can upload your design and order personalised packaging printed here in the UK.

If you have specific packaging needs, don't hesitate to talk to our friendly team. We can either create tailor-made packaging in-house or locate the perfect solution through our global supply chain network.

At PB Group, we are dedicated to making a positive impact on the environment. Our commitment to environmental issues is an ongoing journey, and we're constantly exploring sustainable opportunities made possible by the latest technology. We believe in producing in a socially responsible way, and this principle is deeply ingrained in our company culture. Thank you for being a part of our journey towards a better, more sustainable future.

Jon Lomax,
Managing Director

You can always take advantage of our "try before you buy service" and request a FREE sample!

REVIEWS
★★★★★

With over **13,050+** reviews on Trustpilot, you can rest assured that you are making the right choice for your packaging needs. Just search trustpilot for www.polybags.co.uk.

FRANCES ★★★★★

A good example and experience of buying online. Good quality and good value bags delivered swiftly.

SHEENA ★★★★★

Fantastic service & prompt delivery, I would definitely recommend them to anyone and would use them again.

CAROLE ★★★★★

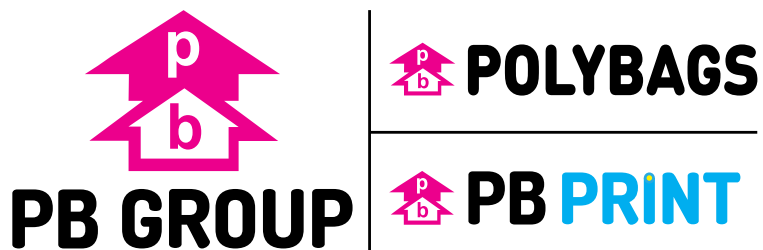

The sample was sent quickly. It is useful to offer this service as customers are able to ensure they have the product they need. Order dealt with very quickly and emails kept me updated at all times.

To deliver high-quality sustainable packaging with a fast and professional service, enabling our customers to Store, Protect and Transport their goods efficiently.

Think Packaging, think PB Group

PB GROUP

Packaging for Business

At PB Group, we believe that packaging is not just a necessity; it's an integral part of your products functionality and purpose. Whether you are an individual, a small business or multi-national corporation, our approachable and knowledgeable team are always ready to help with custom-made manufactured orders and readily available stock products.

POLYBAGS

Flexible Packaging Specialists

Our ability to manufacture flexible films allows us to create tailor-made products to meet individual needs. Additionally, we produce readily available stock lines (which can be ordered through www.polybags.co.uk) for immediate hassle-free delivery.

PB PRINT

Personalised Printed Packaging

PB Print offers personalised printed products using the latest printing technology right here in the UK. Whatever your printing needs we will work with you to find a packaging solution that offers you a personalised, high quality and reasonably priced product that can be created and delivered quickly.

Experience the PB Group Difference

When you choose PB Group, you choose a trusted partner who will be with you every step of the way. Our fast and friendly service, combined with our unwavering dedication to excellence, sets us apart from the competition. Contact us today and let's embark on a packaging journey and together, we'll create packaging solutions.

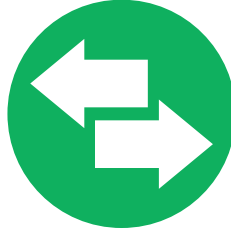

HOW WE CAN HELP IN YOUR SUSTAINABILITY JOURNEY

REDUCE

REUSE

REPLACE

RENEW

RECYCLE

At PB Group, we recognise that there is no one-size-fits-all approach to sustainable packaging. Each product has a distinct lifecycle and therefore requires a customised approach to minimise environmental impact. We understand that sustainable packaging does not possess a “magic formula” that can miraculously solve all environmental challenges and have zero impact. Instead, sustainable packaging aims to minimise those impacts compared to conventional alternatives. Our team focus on three key pillars when discussing and helping to choose sustainable packaging options with customers:

1. Source reduction.
2. Materials selection.
3. End-of-life management.

Source reduction involves minimising the amount of packaging used, optimising size and weight, and eliminating unnecessary components. By working closely with our experts, you can explore design solutions that not only meet your functional requirements but also significantly reduce the environmental impact. We focus on finding the right balance between product protection, aesthetics, and source reduction. This all contributes to a reduction in the overall environmental footprint and waste generation.

Materials selection is a key aspect PB group can help add value in your sustainability journey. Our team of material specialists is dedicated to working with renewable, recyclable, and biodegradable materials that align with sustainable packaging practices. This encompasses a wide range of options such as paper, recycled plastics, compostable materials, and cutting-edge bio-based alternatives.

End-of-life management focuses on the post-consumer phase of packaging. The ultimate goal of end-of-life management is to establish a system where packaging materials are recovered, reused, or regenerated, thereby minimising the demand for virgin resources. Our team can provide expert advice on materials that align with desired end-of-life options considering your specific preferences or requirements.

OUR MANUFACTURING & GLOBAL SOURCING

We take immense pride in not only being manufacturers of top-quality packaging products but also global sourcing experts. This allows us to offer a diverse range of packaging solutions by combining our in-house manufacturing capabilities with a comprehensive global sourcing network. Through strategic partnerships and collaborations worldwide, we source an extensive selection of packaging that complement our own offerings. This allows us to provide our customers with a one-stop-shop experience, where they can find tailor-made packaging solutions.

Waste Management

Nearly all activity in life creates waste. That's why PB Group makes sure that everything from grass cuttings to clinical waste can be collected, transported and disposed of in the safest most efficient way.

Internally we operate a 100% Recycling Target

PB Group offer sustainable alternatives throughout our packaging ranges and operate environmentally responsible processes throughout our manufacturing. Our in-house manufacturing processes are designed around a 100% recycling principle. This means that wherever recycling waste is more energy efficient than disposal we will recycle. We have invested in state of the art in-house recycling technology to further reduce the environmental impact caused by collection and transportation of recyclable material. In reality this means we reuse nearly all of our waste plastic products and are able to recycle with minimal energy output.

FLEXIBLE POLYMERS

Our manufacturing ability allows us to make products designed specifically for your business, tailored exactly to your needs and printed with your own company design, branding or messaging if required. You don't need to know anything about the manufacturing process as we manage everything for you. For an in-depth guide to our manufacturing click/scan QR below.

We use a variety of flexible films, each with slightly different properties. The most common ones are as follows:

Melt 2 Film Grade	Linear	Compostable
Melt 1 Low Slip	Hi Tensile	Reprocessed
High Melt 4	Polymax	I'm Green TM

Tint or Opaque Colour?

The colour strength of the film depends on a combination of factors; The particular colour chosen, the film thickness and the percentage of colour blended in. Colour strength ranges from Tint (light colour blend) to Opaque (strong colour blend) and we can make to your exact requirement or match to your sample. Lightfast colour film can be supplied in black above 75 Micron thickness.

COLOURS

Listed below are the most frequently requested colours

 Red (5020)	 Deep Orange (1046)	 Chocolate Brown (ENZ59029)	 Gold (7171)	 Ivory (9035)	 Strong Yellow (L2546)
 Light Yellow (2057)	 Bright Green (3450)	 Grass Green (3510)	 Khaki Green (3367)	 Bottle Green (3015) TINT	 Dark Green (3888)
 Violet (4022)	 Navy Blue (4656)	 Royal Blue (4021)	 Sky Blue (4535)	 Pink (5246)	
 White	 Silver (7030)	 Silver Grey (8760)	 Dark Grey (8368)	 Black	MORE COLOURS AVAILABLE ON REQUEST

ADDITIVES

VCI (Vapour Corrosion Inhibitor)
Protects the goods against corrosion.

Freezer Grade
EVA additive to prevent film cracking down to -30 degrees Centigrade.

Ultra Violet Inhibitor
UV additive to prevent degradation of the film when stored outside.

Anti-Static
Reducing the ability for static build up in the film.

Biodegradable Additive
Additive that acts as a catalyst to accelerate the degradation process.

Degradable Additive
Additive that accelerates the degradation process.

Degradable materials do not require living organisms to break down. Instead, chemical additives are used to make it crumble / fragment into smaller pieces more quickly than traditional plastic when exposed to the natural elements (sunlight, air & water).

Biodegradable simply means the breakdown of organic matter by micro-organisms, such as bacteria and fungi¹ over time into elements that are found in nature, such as CO₂, water and biomass, which is true for most materials on the planet.

POLYMER BLENDING

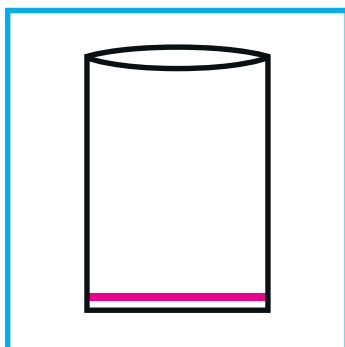

We've invested in cutting-edge polymer blending technology, enabling us to seamlessly combine recycled and virgin polymers. This allows us to deliver high quality, tailor-made products with the flexibility to include anywhere from 30% to 100% recycled polymers.

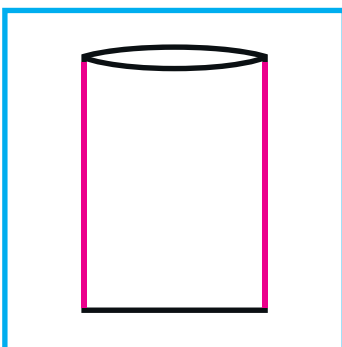

FILM CONVERSION

The rolls of flexible film that leave the extrusion process can be turned into a wide range of products, (Sheeting or Bags) depending on how it is cut and folded before being wound onto the roll.

SUSTAINABLY SOURCED PAPER

Sustainability is at the heart of our paper packaging strategy. We prioritise working with suppliers who adhere to stringent environmental standards and have earned independent verification of their sustainable forestry practices. This ensures that the paper used in our products comes from responsibly managed forests, where conservation and responsible harvesting are paramount. This contributes to the preservation of biodiversity, the protection of vital ecosystems, and the promotion of ethical and environmentally-friendly practices.

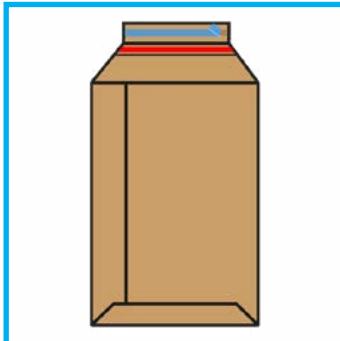

PAPER CONVERSION

Renowned for its strength, printability, recyclability, and customisation capabilities we convert paper packaging together with corrugated solutions across our global supply chain network. Robust and lightweight packaging like paper carriers, mailing bags and rolls emerge from the conversion of kraft paper, while corrugated packaging takes shape as boxes, cartons and rolls.

Create Unique Printed Packaging

Sometimes you need your packaging to work a little harder for you. It might be that you need it to advertise your businesses and shout about your services or provide crucial storage and safety advice.

Endless Possibilities

Here at PB Group, we offer a wide range of customisable products from logo-printed carriers or mailing bags to clinical waste and recycling bags. Whatever your printing needs we will work with you to find a packaging solution that offers you a personalised, high quality and reasonably priced product that can be created and delivered quickly.

Brand Advertising

We understand that the best way to advertise your business is to get your brand out there as much as possible. With our printed carrier and mailing bag solutions, you provide your customers with a walking advert for your business which allows your business to really stand out from the crowd. If you're unsure about what might be the best choice for your business just pick up the phone and our friendly team will be happy to discuss the best personalised solution for you.

Safety Advice

Sometimes our products are about much more than packaging and storage. Our range of waste disposal bags and recycling bags can be used to contain potentially harmful materials and clearly marked packaging can ensure the safety of your customers and employees. So whether you simply want to encourage your employees to recycle responsibly or address the risk of a hazardous material we can create a personalised bag for you.

Customer Messaging

Beyond advertising and safety measures personalised packaging is a fantastic way to pass on key messages to your customers. It might be special instructions on how to take care of your product, proper storage advice or contact details. Our printing, like all of our products and services, is finished to our own high-quality standards so you can ensure that important messages will be clearly visible.

How do I create a personalised packaging product?

Simply email or pick up the phone to our helpful staff. PB Group are a specialist packaging manufacturer so we may just be able to create something unique for your business.

Get Personalised with PB Group today!

HOW TO MAKE AN INFORMED DECISION?

The environmental benefits of green / eco-friendly products are not that they somehow fix the environment or have zero impact, but rather that their environmental impacts are less than those of similar products. *Life Cycle Assessment (LCA)* is a tool for the systematic evaluation of the environmental aspects of a product through all stages of its life cycle. As such, if implemented well, it can provide a valuable tool to evaluate different options at any given point in time¹.

How to measure Environmental Impact?

Total Environmental Impact = Cost of Production + Cost of Use + Cost of Disposal

The key indicators/variables to compare include:

PRODUCTION - What is the impact of producing?

- Energy input, Natural resource use, Transportation, Emissions from manufacturing.

USE - How use of the product impacts humans or the environment

- Impact on human health, Lifespan of the product, Environmental impact of use.

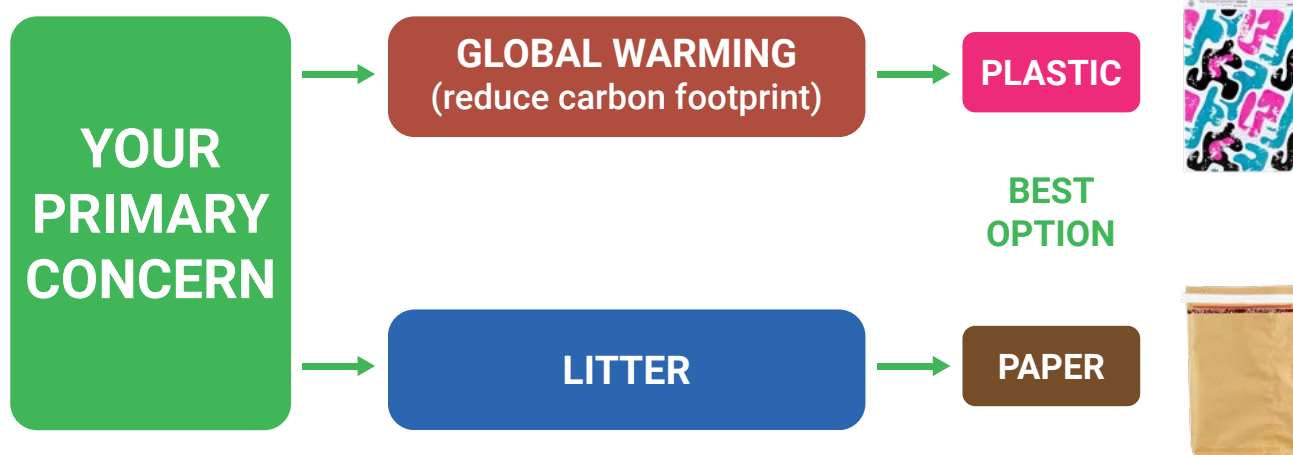

POST-USE - How disposal of the product impacts the environment

- Pollution of natural environment, Emissions from disposal, Cost of recycling.

According to a study, a plastic bag in eight out of nine impact categories (eg. carbon footprint, ecotoxicity, eutrophication, human toxication) has a lower impact compared to a paper equivalent. Products can have eco-friendly properties from one perspective but not from another. *"It takes more than four times as much energy to manufacture a paper bag as it does to manufacture a plastic bag and paper manufacturing process, produces a higher concentration of toxic chemicals. However, paper is more widely recyclable and decomposes much more quickly than plastic, therefore it is less likely to be a source of litter and pose a risk to wildlife²."*

The key issue with paper bags = CARBON EMISSIONS

The key issue with plastic bags = LITTER

MATERIAL OPTIONS - WHICH IS BEST?

We've created a range of visual icons designed to assist you in recognising the material characteristics relevant to the different packaging materials.

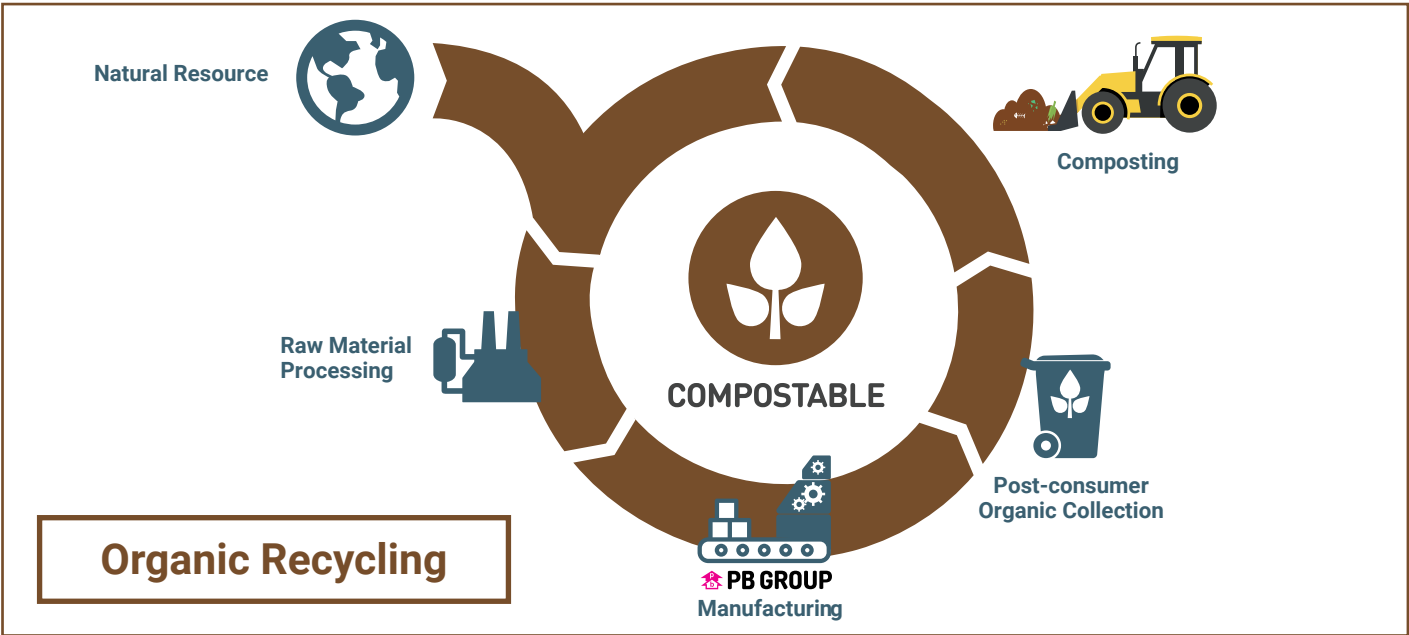

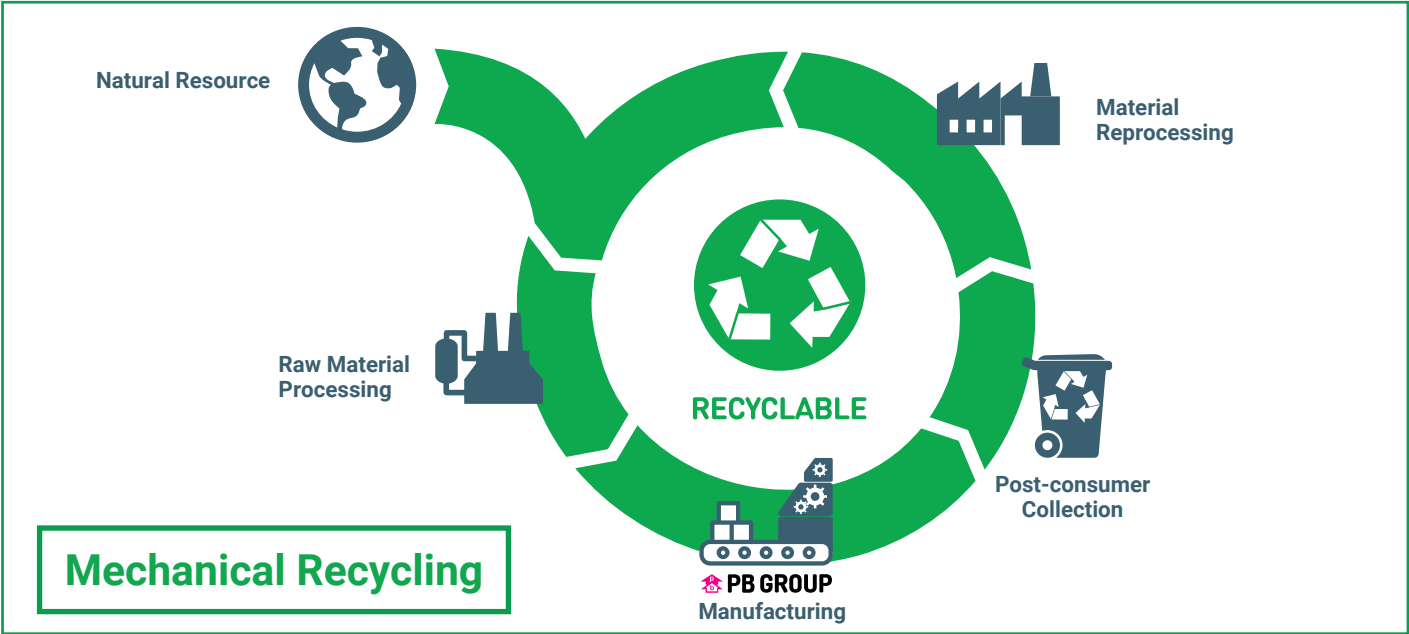

Icon	Description
 <p>100% RECYCLED CONTENT</p>	<p>We are making an increasing range of products with a significant proportion of the content from recycled material. PB Group' recycled material does not always come from the same source. Some of it is taken from in-house industrial waste, whilst some is taken from post-consumer recycling. Certain recycled products cannot be considered as 'food safe', because the recycled material may contain contamination substance residues prior to the recycling process.</p> <div>    </div>
 <p>95% RENEWABLE SOURCE</p> <p>I'm green</p>	<p>Polymers derived from renewable resources offer the opportunity to benefit society and the environment by reducing demands on fossil resources. Sugars, oils and other compounds in renewable feed-stocks can be converted into chemicals and polymers using conversion processes similar to those employed by the petrochemical industry. Currently, it is a tiny percentage of the overall plastics market, but is growing rapidly.</p> <p>I'm Green is polythene produced from sugar cane, rather than traditional fossil fuels. It performs in the same way as traditional fossil-fuel-based polythene and is chemically identical, but has a renewable, bio-based carbon content share of more than 95% (ASTM D6866 standard). I'm Green can also be recycled with traditional polythene. A life-cycle analysis calculates that each tonne of I'm Green polythene produced captures up to 3.09 tonnes of CO2 out of the atmosphere through the sugar cane growing process.</p>
 <p>COMPOSTABLE</p>	<p>Compostable polymers are engineered to undergo structural degradation and decomposition, making them ideal for short-term item storage. 'Composting' denotes an accelerated biodegradation process that occurs in controlled environments, primarily marked by active aeration and natural heat generation resulting from the biological processes within the material. PB Group's lineup of compostable packaging materials is sourced from natural materials like sugarcane and potato starch, as well as renewable and fossil fuel resources. These resources can be transformed into chemicals and polymers using processes akin to those used for traditional polyethylene films.</p>
 <p>D DEGRADABLE</p>	<p>Additive that accelerates the degradation process. Materials do not require living organisms to break down. Instead, chemical additives are used to make it crumble / fragment into smaller pieces more quickly than traditional plastic when exposed to the natural elements (sunlight, air & water).</p>
 <p>B BIODEGRADABLE</p>	<p>Additive that acts as a catalyst to accelerate the degradation process. Simply means the breakdown of organic matter by micro-organisms, such as bacteria and fungi over time into elements that are found in nature, such as CO2, water and biomass.</p>
 <p>PAPER PAPER PRODUCTS</p>	<p>Paper poses less of a litter problem than most other packaging and it is widely recyclable. Nevertheless, paper packaging has a much greater carbon footprint than polythene, during the production and transportation process.</p>

to view more details.

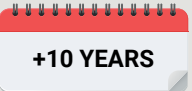

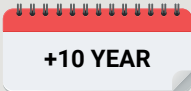

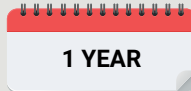

DISPOSAL OPTIONS - WHICH IS BEST FOR YOU?

Icon	Description
 RECYCLE	Mechanical recycling. The process of mechanical recycling has its own environmental burden in using energy, materials and water to collect, sort and clean. Physical and chemical contamination may also preclude cost-effective recycling, since it needs cleaning processes which are economically and environmentally costly. Not all plastics are currently accepted in domestic recycling collections. Always check your local services for confirmation as difficult-to-recycle items may be collected by other organisations.
 COMPOSTABLE	Biological / Organic recycling. Best when contents remain in packaging after use eg food packaging that is likely to be coated in food at the time it is discarded. Avoid when users don't have access to industrial composting. Composting is a highly desirable clean source recycling alternative to landfill. Strictly in terms of energy efficiency, you're not gaining or saving energy by composting, but you're offsetting the energy needed to convert new plant-based materials into new packaging. Remember compostable products don't biodegrade in landfill, the ocean or as litter.

PACKING BAGS

Packing bags are invaluable in both Commercial and Domestic environments. So when you need a packing solution that addresses a wide range of applications, our packing bags offer the ideal cost-effective choice. Perfect for protecting and storing anything from food, small components or large items of furniture. Our packing bags can be sealed with ties, tape or heat for a secure professional finish.

I'm Green - What is it?

I'm Green is polythene produced from sugar cane, developed by Braskem - the world's largest biopolymer producer. It performs in the same way as traditional fossil-fuel-based polythene and is chemically identical, but has a renewable, bio-based carbon content share of more than 95% (ASTM D6866 standard). I'm Green can also be recycled with traditional polythene.

How is it different from traditional polythene?

The main difference is that the ethanol used to produce I'm Green polythene is derived from sugar cane - a renewable raw material - rather than traditional fossil fuels, such as crude oil or natural gas.

So what is the process?

Sugar cane is planted and harvested every year, absorbing carbon dioxide (CO₂) while it grows. Ethanol producers convert the harvested sugar cane into green ethanol. They then supply Braskem, who use their polymerisation plants to transform the ethanol into I'm Green polythene.

Scan to view video

How is it eco-friendly?

A life-cycle analysis calculates that each tonne of I'm Green polythene produced captures up to 3.09 tonnes of CO₂ out of the atmosphere. It has a renewable, bio-based carbon content share of more than 95%, whereas traditional polythene uses fossil fuels that can not be replenished once diminished. I'm Green is also a recyclable product and can be processed in the same recycling streams as traditional polythene.

CLEAR POLYTHENE WITH RECYCLED CONTENT

There are several factors that need to be taken into consideration when using recycled material in clear polythene. As the ratio of recycled content increases in clear packaging, the following can happen:

IMPERFECTIONS & COLOUR SCALE

Colour and the level of product imperfections/roughness can increase resulting in gel or clear/black spots forming.

CLARITY SCALE

Please note: Clarity also reduces as the thickness of polythene increases.

Batch Variation - Each individual batch of recycled material is unique and may cause modifications to the Mechanical properties of the product (tensile strength, impact strength, tear strength and elongation).

Odour - Recycled polythene sometimes has a 'burnt' or 'smoke' like odour. This smell may transfer to certain materials (e.g. clothing, fabrics) if placed in direct contact.

Print - The surface imperfections in recycled content polythene may cause less adhesion to certain print inks.

**FOOD
SAFE**

Recycled plastics (using single-layer extrusion) should not be used for the storage of food materials because there are chances of contamination of unwanted substance residues that may be present inside the plastic before recycling.

If you are unsure of the recycled content options please request a free sample of our recently manufactured recycled polythene samples.

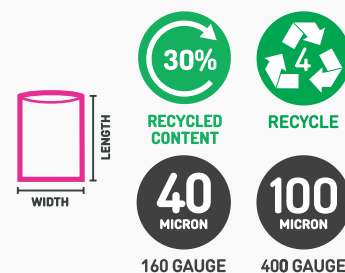

RECYCLED CONTENT PROCESS - POLYMER REGENERATION

Clear + 30% Recycled Content

WHAT IS BIOTRANSFORMATION?

The environmental benefits of Biotransformation (Bio-T) products are not that they somehow fix the environment (litter issues) or have zero impact, but rather that their environmental impacts are less than those of similar products.

Scan to
view video

PB Groups' range of biodegradable packaging is made from regular polythene with a Bio-T additive that accelerates the degradation process and is scientifically-proven to biodegrade in an open-air environment without producing any microplastics. The additive - produced by Polymateria - uses 'time-set' biodegradation, where the product remains recyclable during its service life but, in the unwanted event of littering, will break down and biodegrade into natural-benign materials in an open-air environment.

Bio-T products are not a solution for ocean / marine litter as they don't biodegrade due to the lack of heat and air in water. Biodegradable does not mean digestible or water soluble.

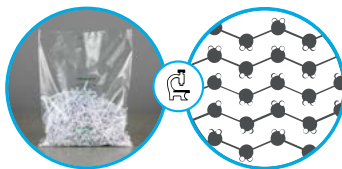

BIOTRANSFORMATION LIFE CYCLE ASSESSMENT

Phase 1 - Product service life

Phase 2 - Weathering (After Littering)

Phase 3 - Biodegradation in the natural environment

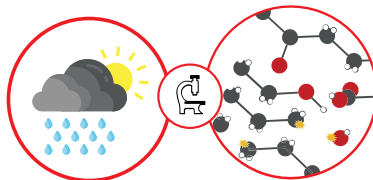

BIOTRANSFORMATION TECHNOLOGY

POLYBAGS

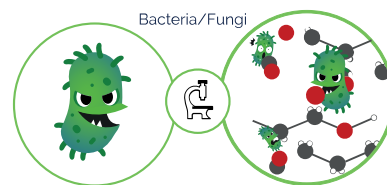

Recyclable

DEGRADATION

Degradation = Exposure to natural elements

BIODEGRADATION

Biodegradation needs micro-organisms

Biodegradable = No Microplastics + No Toxic Substances

BIOTRANSFORMATION ADDITIVE

Phase 1 - Storage & product service life: Prior to use, it is recommended that the bags should be stored (between 17-23°C) in their original packaging away from direct sunlight and used within 12 months from the date of purchase. During the bag's service life, the Bio-T technology is dormant and the packaging retains all of the functionalities of regular polythene. It can be recycled just like regular soft polythene packaging. If disposed of in a landfill, the biodegradation process takes much longer due to the lack of exposure to an 'open-air environment' and the micro-organisms required to break the product down.

Phase 2 - Weathering: The material structure has been engineered so that, in the event of littering, exposure to natural environmental conditions such as sunlight, air and water will cause the material to self-destruct. The Bio-T technology attacks the crystalline and amorphous region of the polymer structure, transforming it into a waxy substance that is no longer plastic. Ecotoxicity tests have demonstrated that this wax-like substance is not harmful to the environment.

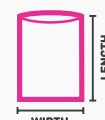

The published scientific results show that the PB Group material is compliant with PAS 9017:2000 on weathering of polyolefins.

Glassine paper is known for its pH neutrality and acid-free characteristics, making it an excellent choice for various applications. These paper bags are crafted from wood pulp, undergo a precise process that aligns the fibres uniformly, resulting in a luxurious, smooth finish. One of the remarkable features of glassine paper bags is their ability to provide effective protection against grease, water, air, and moisture, ensuring the contents remain in pristine condition. Moreover, the convenient peel-and-seal strip simplifies the packaging process, making it a perfect fit for the dynamic world of ecommerce and retail.

* See page 139 for our Paper Garment Covers on the roll.

POLYMAX

Maximum Strength

Polymax has been engineered for toughness, flexibility and is up to 40% thinner than standard polythene. This advanced blend allows packaging weight be reduced by up to 40% less and cost up to 30% less than the equivalent traditional polythene. The general rule is the larger the bag the larger the potential savings. Polymax is also a sustainable polythene blend that is 100% recyclable and can be converted back into polymer and re-manufactured instead of going to landfill.

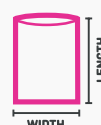

This advanced blend also reduces the amount of CO₂ produced through the manufacturing process as less raw material is used compared to traditional polythene. Our stocked sizes are listed below. If you require a bespoke size of POLYMAX or POLY20 please get in contact directly with our sales office.

Polymax Hercules Bags

Blend is equivalent to 62.5 Micron traditional polythene.

POLY
20

THINNER & STRONGER

We are now taking manufacturing orders for our new POLY20 blend which has upto a 20% weight and 10% cost saving compared to the equivalent traditional polythene blend. (*Calculation based on minimum bag width of 450mm and minimum product run of 250Kg).

HI-TENSILE

Puncture Resistant

Our high tensile bags are manufactured from a blend of polymers which create a lightweight and strong film. In addition to a good tensile strength, these bags offer good puncture and tear resistance and can be 50% stronger than standard polythene of the same thickness.

The bags are available with either a 'frosty clear' or blue tint appearance and are used extensively throughout the food processing industry.

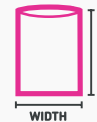

This sustainable polythene blend is 100% recyclable and can be converted back into polymer and re-manufactured instead of going to landfill.

Hi-Tensile - Clear

Great puncture resistance yet extremely thin & lightweight.

ROLLS OF POLYTHENE

As part of our core business we stock a massive range of plastic and polythene film on the roll, including poly sheeting and poly covers. Polytubing (layflat tubing or simply LFT) is commonly used for wrapping items that are difficult to bag up.

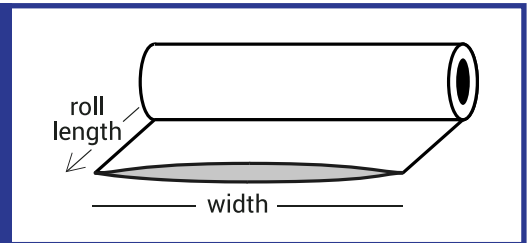

Where more substantial covering is needed for flooring, building or agriculture we stock a huge range of wide plastic sheeting and DPMs, shrinkable pallet covers for outside and in-transit protection in addition to specialist ranges of polythene film.

Made to order

Films are available for manufacturing orders in a wide range of grades, colours, blends and additives, to your unique specific requirements. (See pages 11-19 for more information). Just give us a call to discuss your options.

PB Group can also custom print your unique product / brand details or even usage and safety advice onto layflat tubing. Just give us a call to discuss your requirements.

We extrude tubing and sheeting in any thickness between 20 & 250 micron. All rolls are supplied on 75mm diameter cardboard cores as standard.

BRANDING YOUR POLYTHENE ROLLS!

- Highlight essential company information & logos with a diverse range of colours to choose from.
- Personalise with your brand, instructions for use or unique message.
- Options include Antistatic, Recycled content, Biodegradable.
- Roll widths available from 50mm to 1200mm

MAILING BAGS

Sometimes you need your Mailing Bags to work a little harder for your brand. It might be that you need them to advertise your business and shout about your services or provide crucial storage and safety advice. Here at PB Group we offer a wide range of customizable products. By creating a personalised Mailing Bag you will provide a durable and clear message to your customers throughout the delivery process, whether it be a walking advert for your business or a discreet package that conceals it's contents.

Mailing Bags Specialist

Extrusion

As a manufacturer we have various types of polythene film your mailing bags can be extruded from including:

- Clear.
- Co-ex (white/black).
- Various colours.

All are available in different thicknesses to suit your individual requirements. Biodegradable additives can also be added at this stage of the process.

Print

Your uniquely designed flexographic plates are used to transfer your designs onto the extruded polythene.

We can print anything from a simple 1 colour design to a complex 4 colour printing process.

PANTONE MATCHING AVAILABLE

Conversion

Our size options allows you to send anything from jewellery or phones to large items like duvets and multiple clothing packages. Self adhesive 'Sealing Strip' options include:

- Permanent tamper proof.
- Resealable.
- Double Strip.

The Double Strip coupled with a carrier handle is increasingly popular for 'Click & Collect' retail e-commerce businesses.

We can help with orders large and small

PB Group have a wide range of Mailing bags enabling customers to protect and transport their goods efficiently. We can manufacture one-off or repeat orders of a couple of thousand units or even a couple of million, depending on your requirements. So from individuals to some of the best loved high street brands and big businesses, PB Group is constantly helping customers with their mailing process. Don't just take our word for it, read our customer feedback online on **TrustPilot** reviews.

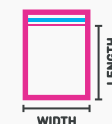

Simply send us over your design with your order. If you're unsure over what might be the best choice for your design just pick up the phone and our friendly team will be happy to discuss the best personalised solution for you. All we need to know are.

- Quantity required
- Size(s)
- Number of colours of your artwork

*Recycled polythene sometimes has a 'burnt' or 'smoke' like odour. This is completely normal and does not affect the overall performance of the material. The smell may transfer to certain materials (e.g. clothing, fabrics) if placed in direct contact.

Compostable*

Ivory white semi transparent Compostable mailing bag which material conforms to EU compostability standard EN13432.

Commodity Code: 3923210000

* Due to the nature of the material the adhesive peel & seal strip is only semi-permanent on initial contact sealing. A permanent seal requires the mailer to be left at room temperature for several hours once sealed.

Compostable Clear

*Our Clear Compostable material has a slight frosted clarity in appearance when compared to traditional polythene.

BUBBLE & PROTECTIVE

Bubble products and protective packaging are used to protect delicate items in storage. Dealing with breakages and returns is an expensive business, it is far cheaper to invest in the correct packaging. We offer bags with adhesive strips for bagging both general and electrical components. Rolls of bubble are also available for when you have a range of sizes or bulkier items to protect. We also stock polystyrene chips and beads for packing in boxes.

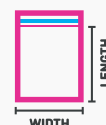

Clear Bubble Bags with Peel & Seal Strip

10mm diameter (small) bubble and self-seal strips to close.
Made with 30% recycled content

Commodity Code: 3920000000

HEXAPAPER presents a pioneering solution through its hexagonal-shaped cells that interlock seamlessly. Crafted entirely from 100% recyclable and biodegradable paper, it champions sustainability and aligns with eco-friendly practices, enabling businesses to make substantial strides towards reducing their carbon footprint.

The strength of the tessellating hexagon design ensures robust protection. Moreover, the expandable honeycomb structure enables exceptional flexibility and impressive elongation capacity, offering an additional 60% length when extended. This not only helps to minimise shipping costs but also ensures comprehensive protection for handles, unique edges, and unconventional components, making it an invaluable asset for businesses seeking efficient, sustainable packaging solutions.

This premium acid-free tissue paper boasts exceptional quality. Its acid-free nature makes it an ideal choice for elegant presentations and becomes essential for packaging items intended for food use, such as crockery and cutlery. Utilising acid-free tissue is crucial in safeguarding these goods during storage or transit, preventing the release of harmful acids or toxins onto delicate items. Choose from an array of colours to further enhance the presentation and appeal of your items.

**HEAT
SEALABLE**

Our stand-up pouches have a grip seal resealable strip allowing the pouch to be resealed after the initial opening which helps preserve the freshness of the contents. The header is also heat sealable with a standard heat-sealer. The pouches are perfect for manually filling most semi-wet and dry food products such as confectionery, cereals, tea, coffee, pet food, dried fruits.

CARRIER BAGS

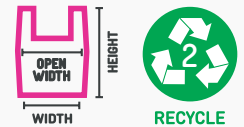

From carrying your takeaway or designer clothes and perfumes, PB Group carriers are well equipped for the demanding retail sector. What's on the bag is sometimes more important than what's inside - we offer a printed solution to promote your brand or a particular message. We can custom print carriers ensuring your brand or message stands out from the crowd when walking down the high street or visiting a trade show.

PB Group provides you with the widest range of economy stocked vest carrier bags at bulk trade prices. These include ultra thin high density, supergrade strength, coloured, degradable, recycled and on a roll carriers.

CONTACT US TO DISCUSS USING YOUR OWN DESIGN

- 5 size options
- Available in white & brown kraft paper
- Low minimum order quantity (100 units)
- Made from responsibly forested materials
- White labelled boxing option available
- Carriers are fully recyclable
- 'One-Off' printed sample service available

Not quite sure? Try our 'Unique Printed Sample' (UPS) with your own design to see the exceptional print quality firsthand? Pay £25 + VAT for a one off sample with your artwork printed on 1 side. The best part is that the sample fee is refundable after your first order with us. (Conditions apply)
Just speak to one of our print advisors to find out more.

How to Create Your Personalised Carrier

1. Bag Size (5 Sizes)
2. Bag Colour (Brown or White)
3. Print Sides (1 or 2)
4. Print Colours (1 Colour or Multicolour)
5. Email your Design to Us
6. Quantity (100 - 2000+)
7. Approve Your Artwork
8. Delivery 7-10 Days After Approval

FREE
SAMPLE

Just send us your address and we will post you a sample pack so you can see the different bags available.

More sizes available. Contact us for details.

*The surface imperfections in recycled content polythene may cause less adhesion to certain print inks. Please check with our sales team for further information.

How do I create a personalised Carrier Bag ?

Simply send us over your design with your order. If you're unsure over what might be the best choice for your design just pick up the phone and our friendly team will be happy to discuss the best personalised solution for you. All we need to know are.

- Quantity required
- Size(s)
- Number of colours of your artwork

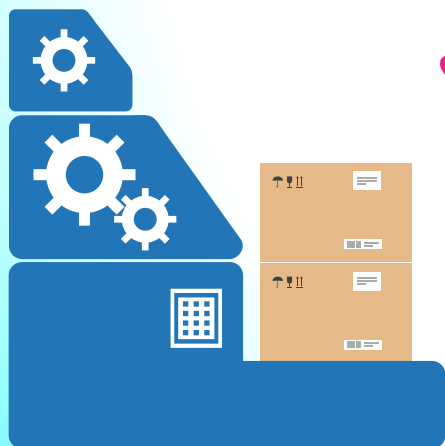

4 Simple Steps to print your personalised carrier bag

1

Send us your artwork. (We need a high quality resolution file of at least 300dpi.)

3

When you have approved the design we make your unique printing plates. Your bags will now be manufactured.

2

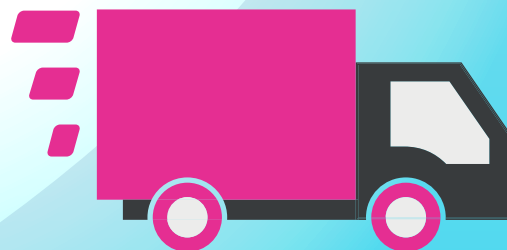

Paper
Carrier

Polythene
Carrier

We send you a PDF of what your artwork will look like on the carrier bags for your approval

4

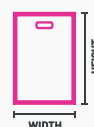

Delivery within **3 weeks** of approving artwork.

BAGASSE

Disposable Food Packaging

What is Bagasse?

Bagasse is a natural, fibrous byproduct of sugarcane processing, now widely used for creating eco-friendly disposable food packaging. Made from an annually renewable crop, bagasse turns what was once agricultural waste into a sustainable resource that supports circular economy goals.

Key Benefits of Bagasse Packaging

- **Sturdy & Heat-Resistant:** Withstands temperatures up to 120°C, making it ideal for hot food service.
- **Microwave-Safe:** Perfect for quick reheating (up to 800 Watts for 2 minutes).
- **Fridge & Freezer Friendly:** Bagasse can handle cold storage, preserving food integrity in fridges or freezers.
- **Versatile with All Foods:** Works well with greasy or moist foods, eliminating the need for additional plastic linings.
- **Safe for Food Contact:** Made from natural materials, bagasse is food-safe, free of toxins and suitable for direct contact with food.
- **Certification & Testing:** Certifying a particular product to a 'Biodegradable Standard' is sometimes not possible due to high testing costs. Where a product has been uniquely certified we are happy to provide the appropriate certification.

Eco-Friendly Disposal / End-of-Life Options

Bagasse is 100% natural and compostable, designed to be commercially composted for a greener waste disposal solution. Should it end up in nature, bagasse biodegrades much faster than plastic, reducing risks to wildlife and ecosystems. A product with excessive food-stuff residue may affect the rate of biodegradability and contaminants like food and grease can disrupt the recycling process.

Flexible Product Options

Bagasse can be moulded into various shapes, sizes, and thicknesses to suit many packaging needs, from plates and trays to cups and containers.

To ensure our food packaging is suitable for your specific food application, we recommend using our 'free sample service' to try before you buy.

KRAFT

Disposable Food Packaging

What is Kraft Paper/Board?

Kraft paper and board are made from natural plant fibres, primarily wood pulp, making them biodegradable and compostable. When a leak-resistant layer, such as PE, is added, Kraft packaging can still be sustainably disposed of through traditional kerbside recycling.

Key Benefits of Kraft Packaging

- **Sustainably Sourced:** Made from renewable resources, with recycled content used where possible without compromising food safety or quality.
- **Sturdy & Heat-Resistant:** Suitable for hot counter service, able to withstand temperatures up to 120°C.
- **Microwave-Safe:** Perfect for reheating at up to 800 Watts for 2 minutes.
- **Fridge & Freezer Friendly:** Safe for chilled storage and freezer use.
- **Ideal for Various Food Types:** Designed to handle greasy or moist foods.
- **Certification & Testing:** Certifying a particular product to a 'Biodegradable Standard' is sometimes not possible due to high testing costs. Where a product has been uniquely certified we are happy to provide the appropriate certification.

Eco-Friendly Disposal / End-of-Life Options

A product with excessive food-stuff residue may affect the rate of biodegradability and contaminants like food and grease can disrupt the recycling process. For Kraft packaging with a PE layer, kerbside recycling is recommended. For items with lids made from PP (for hot use) or PET (for cold use), check local recycling guidelines to confirm the best disposal methods.

Flexible Product Options

Our Kraft packaging is available in various shapes, sizes, and thicknesses to suit different needs, including containers, cups, and boxes.

To ensure our food packaging is suitable for your specific food application, we recommend using our 'free sample service' to try before you buy.

CORRUGATED

Disposable Food Packaging

What is Corrugated Board?

Corrugated paperboard is crafted from natural plant fibres, primarily wood pulp, making it a biodegradable and compostable material. Known for its impressive strength and durability, corrugated packaging is an eco-friendly choice that is easy to recycle both 'Organically' and 'Mechanically'. Normally corrugated paperboard can be mechanically recycled multiple times, making it a valuable resource in the circular economy.

Key Benefits of Corrugated Packaging

- **Sustainably Sourced:** Made from renewable resources with recycled content used wherever possible without compromising food safety or quality.
- **Heat-Resistant:** Designed for hot food service, withstanding temperatures up to 120°C.
- **Strong and Durable:** Known for its structural integrity, corrugated packaging provides excellent protection for products during transport and storage.
- **Versatile for Multiple Foods:** Ideal for a wide range of foods, including pizza, desserts, and other hot items.
- **Certification & Testing:** Certifying a particular product to a 'Biodegradable Standard' is sometimes not possible due to high testing costs. Where a product has been uniquely certified we are happy to provide the appropriate certification.

Eco-Friendly Disposal / End-of-Life Options

Most local recycling facilities accept corrugated materials, making it easy for consumers to dispose of them responsibly. Corrugated packaging can be composted if it becomes highly contaminated with food, providing an environmentally friendly disposal alternative to traditional kerbside recycling. For the best results, check local recycling guidelines to ensure the optimal disposal method.

Flexible Product Options

Our corrugated packaging is available in various box sizes, tailored to suit different food items, from pizzas and desserts to fish and chips.

To ensure our food packaging is suitable for your specific food application, we recommend using our 'free sample service' to try before you buy.

HOW TO MEASURE - BIN LINERS

* Due to the manufacturing processes used with recycled content material, small impurities within the structure of the polythene may be visible and variations in colour tint. These minor impurities do not affect the overall performance of the material.

Coloured 100% Recycled Sacks Medium Duty

VACUUM & NETTING

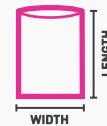

Extend the life of your products by up to five times through the airless environment created by our Vacuum Packaging. The moisture barrier is perfect for storing cooked fish and meat, ready meals and medical products. Our Net Bags are widely used in the agricultural sector and great for packing Wood Kindling and different vegetables including Onions, Swedes and Carrots. The close woven mesh fabric provides excellent ventilation allowing the contents to dry naturally.

Vacuum Pouch Bags - Clear Heavy Duty

Suitable for Multivac, Swissvac & Sammic machines.

Vacuum bags (multi-layered films) are not usually accepted in domestic recycling collections as they are difficult to recycle. However, difficult-to-recycle items may be collected by other organisations. Please check www.recyclenow.com for more information.

Embossed - Clear

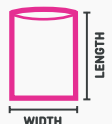

Heat resistant, and can be used for sous vide cooking up to 90°C. Designed to be used with most brands of domestic vacuum sealers, including:

Andrew James, FoodSaver, Gastrobac, JML, Magic Vac, Rival Seal-A-Meal, SousVide Supreme, Vac-Star, Vac Master

Why not order a free sample just to check they work with your specific machine.

Our established reputation in the Medical and Scientific industry is a testament to our commitment to delivering superior-quality products for the laboratories and healthcare sector. These products include:

Biohazard

These translucent bags offer a reliable solution for the disposal of various items, including used pipettes, Petri dishes, culture plates, membrane filters, and more. With their distinct print design indicating biohazardous materials, these bags ensure proper handling and disposal.

Clinical Waste

Our yellow clinical waste bags are for the disposal of infectious waste containing chemicals or pharmaceutical medicines. They have been specifically designed and tested to stringent standards set by UN, the UK Department of Health, and the NHS.

Resealable Specimen

With their airtight seals, these bags ensure optimal protection, maintaining the integrity of the contents while allowing for easy re-opening when needed. They also feature an integral pocket, providing ample room to securely hold accompanying documents or record cards.

Document Transportation

These versatile bags provide the ideal combination of security and convenience, ensuring that your items remain protected and intact during transit. Whether you need to safeguard important documents, delicate items, or cherished possessions.

Tamper Evident

High-security tamper-evident bags are available for when the contents of each individual bag needs to be identified. The bags each feature their own unique sequential tracking code and a tear-off receipt to provide a full audit trail of bag movement.

Resealable Bags

These bags are an ideal choice for laboratories, hospitals, and chemists, offering a user-friendly solution for various needs. With their easy-to-use resealable feature, you can effortlessly open and close the bags, ensuring the utmost protection and containment of contents.

Peel & Seal Specimen

Peel and permanent seal bags are to provide the utmost protection and integrity for your items during transit, these bags offer a reliable solution for safeguarding important documents.

UN3373 Transportation

We have a selection of flexible envelopes and boxes – pre-printed with the UN3373 diamond logo. These items fully comply with Royal Mail guidelines for prohibited and restricted items. For the safe and secure way of transporting biological substances category B, UN3373 / P650.

GLUE STICKS

All adhesives are non-toxic, solvent-free, and are supplied as solid sticks in 5kg boxes.

FSS / 5-10 second set time

Fast-set glue sticks: Superior fast-setting hotmelt for rapid closing and sealing of cartons. Ideal for all packaging applications. (Wood, Textile, Polystyrene, Cardboard)

MPS / 20-30 second set time

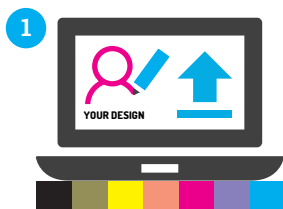

Multi-purpose glue sticks: All-purpose hotmelt with a medium to long set time. Ideal for a wide range of industrial and general-use applications. (Plastic, Wood, Textile, Polystyrene, Cardboard, Metal, Ceramic)

HSS / 20-30 second set time

High-strength glue sticks: Assembly grade hotmelt for difficult surfaces. Excellent adhesion and high molten tack for quick fixing. (Plastic, Wood, Textile, Polystyrene, Cardboard, Metal, Ceramic)

How do I create personalised Tapes ?

1 Decide your tape option & send us your artwork.

2 We re-send a colour artwork pdf proof for you to approve.

3 Delivery within 3 weeks of artwork approval & payment.

Hot Melt Adhesive - Polypropylene or Paper

- Solvent-free, with high initial tack particularly suitable for sealing of recycled carton.
- Requires a dispenser or knife to cut.
- Ideal for use with tape guns & dispensers.
- Minimum order quantity is 72 rolls (1 box).
- Paper tape option is 100% recyclable & FSC Certified.
- Origination cost will apply on 1st order only.*

Commodity Code: 3919000000

No Quibbles Guarantee

We are committed to ensuring that all orders are successfully fulfilled. However we recognise that issues can arise...

- What if you realise that you've made a mistake and do not need so many goods, or even the goods at all?
- What if the product does not turn out to be quite right for your needs?

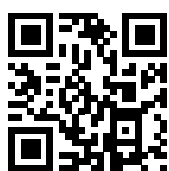

For all stock goods simply return them to us within 14 days of receipt, and we'll refund you in full.

NO quibbles! That's our policy - we hope you like it!

RETURNS

Prices of all products may be updated without notice due to raw material price movements. Please check our website for the most up to date prices.
